

Sierra Installation Guide.

The Sierra is supplied with bath panels, waste kit, 2 x wall fixing brackets.

General notes.

A thermostatic antiscald valve **MUST** be fitted.

Twin wastes are supplied (one with overflow) to offer for faster drainage and safety should one fail. The wastes can be joined or run independently. This is the fitter's decision.

The bath is manufactured in glass fibre. Handle with caution. The bath edges are brittle.

For ease of manoeuvrability we recommend the door is removed. The door has 'lift-off' hinges. Open the door then lift off.

Standard Unit.

1. Lift off door and lay aside.
2. Fit the wall fixing brackets to bath timber frame.
3. Drill and fit taps.
4. Fit wastes and overflow.
5. Place bath in position and adjust height. The bath should be set to its lowest possible height (approximately 170mm to door threshold). Raising the bath may cause user discomfort, and the panels will be too short. On wooden floors, the load should be spread using wooden bearers (3" x 2" minimum).
6. Level the bath using the adjustable feet and lock the feet.
7. Mark wall fixings and plumbing runs.
8. Remove the bath, drill wall fixings and run plumbing into position.
9. Re-position bath and affix to wall and to floor via the bath feet.
10. Connect plumbing. The wastes may be run independently or joined.
11. Re-fit door.
12. Test plumbing for leaks. Fill bath to maximum level and leave for 30 minutes to test door seal.
13. Whilst bath seal is tested, position and trim to size bath panels.
14. Mark bottom of panels onto floor base. Fix battens along floor behind panels.
15. Fit panels. Drill through bottom into batten and top into bath wooden frame. Affix panels using screws and caps. Do not use silicone sealant as this prevents service access.
16. Drain bath and instruct customer on the use of the bath.

SPA AND CHROMOTHERAPY LIGHTS (if fitted)

The spa and lights **MUST have independent power supplies**. DO NOT run from the same source, as this may cause the items to malfunction.

- ◆ Refer to User Guide and leave copy with user.
- ◆ **The door MUST be left unlocked when not in use in order to preserve the seal.**
